

During the week of April 6, 2026, impacts to the public water supply may occur due to the construction of a roundabout by the St. Mary's Co Department of Public Works & Transportation (DPW&T) in the area of PEGG ROAD & WEST WESTBURY BOULEVARD where it crosses over to WESTBURY BOULEVARD.

As a part of that project, waterlines & fire hydrants may need to be relocated by Great Mills Trading Post, the contractor performing this work. During the construction, it is possible that temporary water services outages may be experienced in & around the Westbury Community (see attached graphic).

Should a disruption of water service occur, it will be restored as soon as possible. Upon restoration of water service should you experience cloudy or discolored water, please open & run the largest volume cold water plumbing fixture (i.e., bathtub faucet) for fifteen minutes.

If cloudiness or discolored water persists, please contact MetCom at 301.373.5305 for assistance.
